catrindemau

I think each of you knows about DEFI and what they are. Probably this year this concept has become one of the most common in the crypto world and the most discussed. **

Decentralized finance literally blew up the cryptocurrency industry, tens of millions of dollars are circulating in them, users receive considerable income from them and replenish their bank accounts. This is especially true now, when the world economy has flown into a deep recession and the way out of it is clear.

Molonlabe2

Each of you has already encountered DEFI projects at least once and knows exactly what it is and what it is eaten with) This is a new HYIP trend in 2020 in the cryptocurrency world and the most discussed and perhaps the most profitable. Defi's projects literally broke into the crypto industry, absorbing it for themselves. Dozens, hundreds or even thousands of millions of dollars are spinning in these projects, investors get a good profit and rub their hands in anticipation of future profits. This is especially true at a time when the traditional economy and traditional businesses have been quarantined and their turnover along with profits has dropped sharply.

Catrindemau

However, not everything is as smooth in this industry as it might seem at first glance. There are some difficulties, and their community of DEFI contributors cannot overcome on their own, as it itself manages projects.

Molonlabe2 You think that everything is smoothly pink and fluffy in Daffy, threw in a cutlet and sit and receive dividends. But everything is not as straightforward as it might seem from the outside. And this industry also has pitfalls and difficulties. And the DEFI crypto community is not able to solve them on its

own. Also, classical centralized regulators, both public and private, are unable to help in resolving these misunderstandings. They simply do not have any mechanisms or protocols to regulate this industry because it is: first, new. the second is decentralized

Catrindemau

On the other hand, there is no need to expect help from government agencies and centralized companies. They also do not have regulatory mechanisms, they generally do not understand much in this industry, it is too new and incomprehensible to them.

But a way out was found anyway. This was done thanks to a platform capable of resolving controversial issues impartially and objectively. I think you have already guessed which platform we are talking about - this is Kleros. There was already a review about her in my blog. So, the specific Kleros blockchain court helps to resolve disputes.

Molonlabe2

A cognitive dissonance arises: the upper classes cannot (traditional regulators) the lower classes do not want (their own dafi community) What can be done? what to do? (as we are without Santa's frost)) There is a way out, do not despair. It was found thanks to one platform that specializes in resolving such controversial issues fairly and objectively. This is the Kleros platform. I already had a review for this project. This time, let's take a closer look at it.
