

1. *“Would you like to use “jurisprudence” as a last resort? Well, supporters of the submitter can do the same: What about this recent case – it is obviously of worse quality than the KEEP symbol. Yet, it has been accepted in the T2CR. PROM Token:”*

PROM was voted AGAINST in the first round and the appeal ended in a tie. PROM only got accepted because the requester gamed the system by funding his side of the appeal at the very last moment. The funding deadline was the same for both sides, and there was a misunderstanding by the community about this. People expected the Kleros protocol to work differently, and someone took advantage of that. You could say that PROM only got accepted because people were unaware of how Kleros would work in this niche case. Additionally, the list of rejected tokens due to poorly cut logos with edges all around is as follows:

1. [PowerPool](#)
2. [YF Link](#)
3. [Touch Smart Token](#)
4. [OPUS](#)
5. [DMM: Governance](#)
6. [dForce](#)
7. [CBI Index 7](#)
8. [Yearn.finance](#)
9. [Aragon](#)
10. [Robotina](#)

As you can see, jurisprudence clearly points towards rejecting submissions with poorly cut logos. As soon as this case is over, I will create a removal request for PROM, as it is clearly not of enough high-quality for the T2CR.

<https://forum.kleros.io/t/revisiting-t2cr-policy/460/2>

2. *“Again, there is no policy rule that states the TOKEN SYMBOL should be the same as the PROFILE PICTURES of the project’s media channel. Project logos and token symbols are obviously not the same and can differ. You are creating fallacies here. Even worse: you have no foundation in the policy for this “consistency issue”.”*

Although the guidelines do not specifically require the submitted logo to match the most commonly used logo, a clear precedent has been set by the following - non exhaustive - list of rejected submissions. All of the following submissions got rejected from the TCR, because the provided logo did not match the most commonly used logo.

1. **Unit Protocol**; *denied, because most commonly used logo consists of a squared background, not round with a transparent background, as was submitted to the TCR<sup>1</sup>.*

---

<sup>1</sup> <https://tokens.kleros.io/token/0x9c5222486b2969dc0d045ae1df80c0b32bb4c3880a9b41b59cf63af38b436ad7>

2. **Cap**; denied, because most commonly used logo consists of a squared colored background, not transparent, as was submitted to the TCR<sup>2</sup>.
3. **XIO**; denied, because most commonly used logo consists of a squared colored background, not round with a transparent background, as was submitted to the TCR<sup>3</sup>.
4. **Tellor**; denied twice, because most commonly used logo is round, not squared and not transparent, as was both submitted to the TCR<sup>45</sup>
5. **Edgeless**; denied, because most commonly used logo consists of a squared colored background, not transparent, as was submitted to the TCR<sup>6</sup>.
6. **Math**; denied, because most commonly used logo did not match with submitted logo<sup>7</sup>.
7. **Maker**; denied, because most commonly used logo did not match with submitted logo<sup>8</sup>.
8. **Request**; denied, because most commonly used logo did not match with submitted logo<sup>9</sup>.
9. **Aeron**; denied, because most commonly used logo did not match with submitted logo<sup>10</sup>.
10. **Huobi**; denied, because most commonly used logo did not match with submitted logo<sup>11</sup>.

Moreover, why are you only talking about the “PROFILE PICTURES” used on the KEEP official media channels, while all of the coin trackers are using the TOKEN SYMBOL with the green background too.

3. “I cannot see “clear green edges all around the logo”. This could have been a monitor issue, but since you have taken a screenshot, it is now clear that this is an issue of personal perception.”

If you cannot see those green edges, then it’s probably you who is having monitor issues. It’s visible on my PC, laptop, and my phone. Those green edges are there, this is a fact. It’s not a matter of personal perception, if only being bad sighted falls under personal perception too.
