

Case #603: Incorrect submission - Unreadable ETH address

One of the required elements for submission is a video of the submitter displaying a sign with his Ethereum address. The policy rules specify that this sign should display in a **readable** manner the full Ethereum address of the submitter and the video quality should be sufficient to **discern the characters** composing the address displayed.

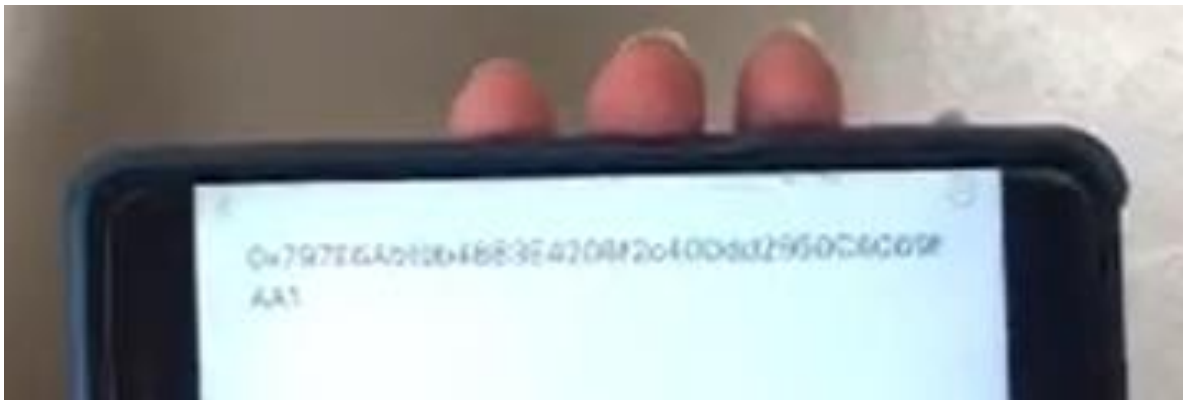

In this case, the submitter shows what seems to be an Ethereum address in a mobile phone but is impossible to distinguish the characters of this address. Even if the video is played frame by frame in full screen mode, the quality is not sufficient to discern all the characters of the address displayed and it cannot be verified if this one match the real address of the submitter.

Submitter ETH address:

 Gaby (GB)

 **0x797e6a5f9b4883e420bf2c40ddd2950c6069faa1**

Sign displayed in the video:

Therefore, the video doesn't accomplish with all the requirements.
