

Blockchain Non-Technical Policies

Guidelines:

- Jurors should carefully check all required fields in each submitted case
- The name should be the most commonly used name to refer to the asset. It does not necessarily need to be the official name given by project creators nor the one in the token contract.
- Contract addresses are an attack vector and should be checked carefully.
- Attached Logos should be PNG format with a transparent background.
- Project names and tickers should be carefully checked.
- In case of duplicates, only the first submission should be accepted. The most recent submissions appear highest in the list.
